

*APPENDIX III-ENVIRONMENTAL  
JUSTICE*

# ENVIRONMENTAL JUSTICE

## ENVIRONMENTAL JUSTICE TECHNICAL ANALYSIS SUMMARY

Ohio Department of Transportation

Office of Technical Services

Section of Modeling and Forecasting

The Travel Demand Forecasting Model was used to objectively quantify the impact of the transportation plan on the population subject to environmental justice consideration (henceforth referred to as the EJ population). Impacts were determined in two categories, accessibility benefits and negative impacts related to the acquisition of land for major new alignments.

To calculate accessibility benefits, the accessibility of each zone with respect to the trip purposes in the model (work, school, shop, other) was calculated as:

$$ACC_i = \sum_j (F(TT_{ij}) * A_j)$$

Where:

$ACC_i$  = Accessibility of zone i.

$F(TT_{ij})$  = Function of the travel time from zone i to zone j (referred to as friction factors).

$A_j$  = Trip attractions of the given trip purpose in zone j.

The area-wide accessibility of a given segment of the population with respect to a given trip purpose was then calculated as:

$$ACC = (\sum_i (ACC_i * POP_i)) / POP$$

Where:

$ACC$  = Accessibility of subject population segment in the study area.

$POP_i$  = Population of the given segment in zone i.

$POP$  = Area-wide total of the given population segment.

This computation was made for both the total area population and the EJ population. This was done for both year 2000 and two scenarios for year 2030 (build and no-build).

The second category of impact was determined by flagging all new roadways in the 2030 build network (versus 2000). These flagged links were then used to flag the traffic analysis zones that they intersect. The total and EJ populations in these flagged zones was then calculated and the percentage of each versus the area wide totals was calculated and compared.

Outcome:

**Percent of Area Population in Zones Impacted by Major Right of Way Acquisition**

Disadvantaged	7.2%
Total	7.3%

**Accessibility of EJ Population**

Accessibility to:	work	school	shop	other	Tot
2000 existing	16020	21524	11517	11618	60679
2030 no build	26432	28005	11296	11504	77237
2030 build	26771	27868	11851	11722	78213

**Accessibility of Total Population**
